

Environet Holding Frames

Environet offers three choices of pad holding frames. Pad holding frames are designed to accommodate all pads offered in the “Bulk Media Rolls & Pads” section.

Use of permanent holding pad frames with disposable media provides the most cost effective way to filter air.

P.V.C.

- Constructed of high density P.V.C.
- Designed to provide strength and durability
- Will not corrode, oxidize, degrade or deteriorate
- Ideal for use in areas of high moisture, condensation and highly acidic or saline atmosphere
- Available in depths of 3/4”, 1”, 2”, 4”, & 5”

Aluminum

- Constructed of heavy duty Aluminum channel
- Provides extra strength and rigidity
- Frames may be bound together and are easily assembled into straight or “V” bond systems
- Retaining wires are available to hold media in place at small additional cost.
- Light weight
- Easy to install
- Will not corrode
- Available in depths from 1/2” to 6”

Galvanized Steel

- 24 gauge Galvanized Steel with back grid made from 28 gauge Galvanized Steel expanded through .055 feed.
- Retaining wires are available to hold media in place at small additional cost.
- Ideal for use where cleaning facilities are not available and a higher velocity of air flow is required.
- Frames may be bound together and are easily assembled into straight or “V” bond systems
- Available in depths of 1/2” to 6”.
